

Press Release

Great interest for saving water with constant flow valves at Hannover 2019!

During one week, April 1 to 5, more than 215 000 visitors and 6 500 exhibitors attended Hannover Fair, the largest industrial fair in the world. Sweden, as the partner country with 160 exhibitors was the fourth largest exhibitor country. It was the 7th year for Bertfelt Teknik to exhibit at the Fair and many Swedish and international visitors came by our booth.

Chancellor Merkel and Swedish Prime Minister Stefan Löfven did not have time to drop by this year, but they together with 4 Swedish Ministers, among the Minister of Trade, Ms. Lindhe, helped to get lots of attention to all the Swedish exhibitors at the fair.

Agne Bogren, CEO of Bertfelt Teknik demonstrate Constant Flow Valves to potential customers.

Agne Bogren, CEO of Bertfelt Teknik could summarize his experience as the following:

“It was very intensive and inspiring five days with many prominent Swedish people such as the Swedish Prime Minister Stefan Löfven, Prince Carl Philip, members of the Wallenberg family and many CEO’s of the biggest Swedish companies. Hannover is evolving with a strong focus on eco-systems in an age of digital transformation. One of our many applications for our constant flow valves is controlling water flow in cooling system in servers of data centres. Our constant flow valves solution ensures a constant flow rate in the cooling system of servers in data centres despite pressure variations and enable to save water. There was a great interest for saving water with constant flow valves, not the least with the new range of really small flow rates starting from 0,15 L/min. A number of French companies were glad to discuss potable water applications since we have now obtained the ACS for the French market.”
